STATISTICAL ABSTRACT 2011

2012 Edition

National Bureau of Statistics
P.O. Box 206 - Victoria - Mahe
SEYCHELLES

Preface

This edition of the Statistical Abstract presents annual data for 2011 with series for earlier years as appropriate.

The Abstract brings together in one publication a summary of available statistics relating to the climate, land areas, demography, tourism, external trade, the economy and finance, production and communication, prices, employment, health, education and crime.

The preparation of the annual Abstract is a lengthy process. More up-to-date information is available in tables published in the quarterly and monthly Statistical Bulletins on tourism, external trade, employment, consumer price index and production, whereas demographic data is up-dated in half yearly bulletins.

Many tables appearing in the Abstract have been compiled from information provided by other government agencies and establishments in the private and parastatal sectors. Their contribution to the compilation of this publication is gratefully acknowledged and we count on their continued support.

The following symbols are used in the tables:

"-" means nil or less than half the digit shown

".." means not available

P = Provisional

Rm = Rupees Million

R = Rupee

('000) = Thousand

No = Number

Km = Kilometres

Where figures have been rounded to the nearest final digit (e.g., to thousands or tonnes) the rounded total need not necessarily equal the sum of the rounded constituent items.

⁽¹⁾ Using mid-year estimates based on smoothed 1994 census data

⁽²⁾ Total fertility = Total number of children born to a woman who passes through childbearing ages experiencing current age-specific fertility rates

⁽³⁾ From 2002-2009 the population estimates have been rebased using the 2002 Census results

⁽⁴⁾ From 2010 the population estimates have been adjusted and rebased using the 2010 Census results

Notes:

⁽¹⁾ Total Fertility Rate (TFR). This indicates the total number of children a woman would have throughout her lifetime if she experienced present fertility rates.

⁽²⁾ Gross Reproduction Rate (GRR). This is similar to TFR except it refers to the number of daughters that would be born during the woman's lifetime.

F = Final P = Provisional

(i) GDP, GNI and GNDI are at current market prices

GNI = GDP + Net factor income from abroad

Valuation using actual exchange rates (higher than official), would give lower US\$ GNI per capita results up until when the currency was floated in November 2008
